SUMMARY

I'm a game developer who enjoys building the systems behind the scenes that make a game feel good to play: cameras, progression, UI and the logic that ties everything together. I learn fast, settle quickly into existing codebases and teams, and I care about writing clean, maintainable code. Curious and collaborative, I'm driven by technical growth and by shipping things that play well, with a particular interest in C++ and low-level, performance-focused programming.

PROJECTS

Pipo the Penguin **Unity**

2025 – 2026 · *Systems Programmer · 3D platformer · final-year capstone* · itch.io/pipo-the-penguin

- Built an adaptive camera system that keeps a fast-moving character framed and readable through tight platforming sections and the central hub.
- Programmed the core progression system, with hub-based level unlocking and rewards that drive the player forward.
- Developed the character customization system, letting players unlock and equip cosmetic items.
- Built the entire UI layer from scratch, including menus, HUD and in-game interfaces.
- Architected the systems with SOLID principles and design patterns, applying object pooling to keep frame time stable.

Fragments of the Abyss **Unreal Engine 5**

2024 – 2025 · *Main Producer & Gameplay Programmer · survival horror* · reiven-9045.itch.io/fragment-of-the-abbys

- Led a four-person team as Main Producer, running Agile/Scrum with Jira for sprint planning, scheduling and iteration.
- Coordinated technical decisions and the build pipeline, taking the game from prototype to a finished release.
- Programmed core gameplay (exploration, puzzles, resource management) in Unreal Engine 5 with C++.
- **Awarded** Game of the Year and Best Third-Year Development Game (ENTI 2025), and Best Academic Game (BCN Game Fest 2025).

ChronoFish **Unity**

2023 – 2024 · *Gameplay Programmer · action / dungeon* · franky-style.itch.io/chrono-fish

- Programmed timing-based combat and dungeon-style progression in C#, structured with OOP and design patterns for clean, extensible systems.
- Managed task planning in Notion and a structured Git-based workflow with GitKraken.

EXPERIENCE

XR Developer Intern

Sep 2025 – Jan 2026 · *Respira*

- Developed an interactive XR augmented-reality experience in Unity, enabling real-time interaction across Meta Quest headsets and desktop/mobile devices.
- Engineered a multiplatform communication system to synchronize monitoring and control between XR and Unity-compatible devices.
- Integrated networked hardware, connecting XR devices to ESP32 microcontrollers over ESP-NOW for low-latency wireless communication.

Web Developer Intern

Oct 2021 – Apr 2022 · *ALIOTH INNOTECH SL*

- Developed a real-time Three.js web app visualizing live public-transport data and bus positions in a hybrid 2D view.

EDUCATION

Bachelor's Degree in Interactive Digital Content (Game Development)

2022 – 2026 · *ENTI · Universitat de Barcelona*

- Multidisciplinary program in programming and game design, with a strong focus on team-based, collaborative workflows.

Higher Diploma in Multiplatform Application Development

2020 – 2022 · *Escola del Treball*

- Multiplatform development using Android Studio, Unity, HTML, JavaScript, Kotlin and Java.
